

How to begin?

Pre-requisite: Oracle IDM Suite 11g R2 PS2 has been installed

Required Software: Oracle IDM PS2 Repository Creation Utility

Steps to be executed

- Run Oracle Fusion Middleware Repository Creation Utility (RCU)
- Run the OFMW Configuration Wizard to configure your OPAM in a new Weblogic Domain
- Configure the Database Security Store.
- Start Admin Server for OPAM domain
- Complete the post-installation tasks.

Run the ***opam-config.sh*** script

Restart Weblogic admin server

- Start OPAM managed server
- Check OPAM server
- Check OPAM Admin console
- Configure appropriate OPAM Admin Roles
